

Framing family conversation after early diagnosis of iatrogenic injury and incidental findings.

May 4, 2010

Barrios L, Tsuda S, Derevianko A, et al. Framing family conversation after early diagnosis of iatrogenic injury and incidental findings. *Surg Endosc.* 2009;23(11):2535-42. doi:10.1007/s00464-009-0450-2. <https://psnet.ahrq.gov/issue/framing-family-conversation-after-early-diagnosis-iatrogenic-injury-and-incidental-findings>

In this study of simulated cholecystectomies, surgical residents felt ill-trained to [disclose](#) both complications (common bile duct injury) and serious incidental findings (gallbladder cancer) encountered during a cholecystectomy. Most concerning, a large proportion of residents did not adequately describe potential complications when obtaining informed consent.
