[Transitions in care](#) between inpatient and outpatient settings are an increasing [concern](#) for patient safety, and professional societies are dedicating [resources](#) to address the issue. In teaching institutions, there is growing emphasis on implementing [systems-based practice](#) curricula for trainees to similarly highlight the importance of patient safety principles. This study describes an innovative multimodal educational intervention that combines didactics, an interactive video, and team-based learning to increase transitional care knowledge and competence in the discharge process. A past AHRQ WebM&M [perspective](#) and [interview](#) discuss care transitions.
