

Automated detection of harm in healthcare with information technology: a systematic review.

November 2, 2010

Govindan M, Van Citters AD, Nelson EC, et al. Automated detection of harm in healthcare with information technology: a systematic review. Qual Saf Health Care. 2010;19(5):e11. doi:10.1136/qshc.2009.033027. <https://psnet.ahrq.gov/issue/automated-detection-harm-healthcare-information-technology-systematic-review>

This systematic review identified a number of methods used for automated detection of safety events, including adverse drug events and nosocomial infections. However, the accuracy of error detection varied widely between different systems.
