---

The Patient Safety and Clinical Pharmacy Services Collaborative aims to improve the care delivered to high-risk patients at safety-net and community-based organizations by implementing evidence-based clinical pharmacy services. This article reports the program's impact over the course of 54 Plan-Do-Study-Act cycles at Lincoln Community Health Center. Systematic changes that integrated patient safety and clinical pharmacy services resulted in improvements in all of the targeted outcomes, including [medication reconciliation](#) and obesity screening. These efforts support pharmacists' fundamental [role](#) in working collaboratively to promote patient safety.
