Despite the designation of [proper labeling](#) as a National Patient Safety Goal in 2006, the problem of unlabeled solutions and medications persists. This newsletter article outlines several incidents involving labeling issues that contributed to patient harm or [death](#) and provides strategies to reduce risks related to [poor labeling practices](#), including ensuring labels are available in all settings that require them, using [tall man lettering](#) to differentiate look-alike drug names, and limiting access to solutions and medications.
