[Simulation training](#) has been explored as a strategy to enhance decision making, [teamwork](#), and communication skills in health care. This book reviews one health system's experience developing a simulation center that engaged nurses, doctors, and related health professionals in interprofessional [education](#) to improve patient safety and includes case studies to illustrate the value of the approach. A past AHRQ WebM&M [interview](#) with Dr. David Gaba discussed simulation as an educational approach.
