Although [prior research](#) has demonstrated that [safety culture](#) can vary widely between different clinical areas in the same hospital, less is known about how safety culture varies in perioperative areas. Researchers administered the [AHRQ Hospital Survey on Patient Safety Culture](#) at a single hospital in 2014. They found that among the 431 respondents working in the perioperative setting, there was significant variability in safety culture by provider type, years in training, and dimension of safety climate.
