

Physician Burnout.

November 30, 2018

Rockville, MD: Agency for Healthcare Research and Quality; July 2017. AHRQ Publication No. 17-M018-1-EF.

<https://psnet.ahrq.gov/issue/physician-burnout>

[Clinician burnout](#) can affect patient safety. This report highlights AHRQ-supported research to [examine](#) burnout in health care as well as efforts to develop and test interventions for [managing](#) and reducing burnout in the care environment. Key findings include the high [prevalence](#) of burnout among United States clinicians and the identification of factors that contribute to burnout, such as short visits, complicated patients, and electronic health record stress. The report also outlines interventions that require additional testing to effectively reduce clinician burnout. An [Annual Perspective](#) discussed the relationship between burnout and patient safety and reviewed strategies to address burnout among clinicians.
