

Work overload is related to increased risk of error during chemotherapy preparation.

May 29, 2019

Carrez L, Bouchoud L, Fleury S, et al. Work overload is related to increased risk of error during chemotherapy preparation. J Oncol Pharm Pract. 2019;25(6):1456-1466. doi:10.1177/1078155219845432. <https://psnet.ahrq.gov/issue/work-overload-related-increased-risk-error-during-chemotherapy-preparation>

This simulation study compared performance of [pharmacists](#) in preparing [chemotherapy](#) under conditions of increasing [workload](#), as measured by the number of doses needed. Investigators found that as the volume of work increased, so did the risk of errors. This finding highlights the need to ensure working conditions promote safety.
