

Dashboard design to identify and balance competing risk of multiple hospital-acquired conditions.

July 13, 2022

Makic MBF, Stevens KR, Gritz RM, et al. Dashboard design to identify and balance competing risk of multiple hospital-acquired conditions. Appl Clin Inform. 2022;13(3):621-631. doi:10.1055/s-0042-1749598. <https://psnet.ahrq.gov/issue/dashboard-design-identify-and-balance-competing-risk-multiple-hospital-acquired-conditions>

Many interventions targeting healthcare-acquired condition reduction and prevention target a [single condition](#), rather than the risks of [multiple conditions](#). This proof-of-concept study discusses clinician feedback on a proposed dashboard to enhance clinicians' management combining the risks of multiple conditions (catheter-associated urinary tract infections, pressure injuries, and falls).
