Long COVID-19 can be [challenging](#) to diagnose. Using electronic health record (EHR) data from patients receiving care in the Department of Veterans Affairs, this qualitative study explored the clinical diagnosis and management of [long COVID](#) symptoms. Two themes emerged – (1) [diagnostic uncertainty](#) about whether symptoms were due to long COVID, particularly given the absence of specific clinical markers and (2) care fragmentation and poor care coordination of post-COVID-19 care processes.
