[Mandatory](#) error reporting systems can help identify types, causes, and solutions to medication-related errors. More than 30,000 medication-related incidents were reported by community pharmacists to the Assurance and Improvement in Medication (AIMS) Program in Canada. Event type, severity, medication class, and method of detection are described. Only 60% of pharmacies submitted at least one report, indicating [compliance](#) with and participation in the AIMS Program remains low.
