Obstetric hemorrhage and severe high blood pressure during pregnancy are leading [known causes](#) of preventable maternal harms in the United States. The [AHRQ Safety Program for Perinatal Care](#), Phase 2 developed toolkits consisting of case scenarios, slides, and facilitators guides to work in tandem to address these threats to maternal safety. The materials inform training opportunities to improve the [safety culture](#) of labor and delivery units and decrease maternal and neonatal adverse events that result from poor communication and system failures.
