The [VIONE \(Vital, Important, Optional, Not indicated, and Every medication has an indication\) tool](#) is used to reduce polypharmacy and potentially inappropriate prescribing. This article provides an overview of VIONE implementation and dashboards used to track VIONE implementation and its impact on prescribing across over 130 Veterans Health Administration medical centers. Since implementation in 2016, VIONE has led to the [discontinuation](#) of over 1.6 million medication orders by more than 15,000 providers.
