Instituting a culture of safety is fundamental to ensuring patient and staff safety. The AHRQ Surveys on Patient Safety Culture™ (SOPS®) [Hospital Survey](#) is a validated survey that has been widely used to assess patient safety culture since 2004. The 2024 report includes data from 445 hospitals. The highest “percent positive” composite measure scores include both effective teamwork and [supervisor, manager, or clinical leader](#) support for suggestions for improving patient safety and addressing patient safety concerns. Overall, when asked to rate their unit/work area on patient safety, 68% of respondents rate their unit/work area as “Excellent” or “Very Good.” This update includes a report focused on the [workplace safety supplemental](#) items.
